Grundprinzip der kurvigen
Kugelbahnen v. Quadtilla

Top view of the
marble run.

This is how it works best:

The speeding up of the marbles on Quadrilla is achieved with different blocks and/or the small red accelerators. The tracks themselves always have to be level and must not be built with a gradient. The height of a track can be compensated with one purple riser. Let your imagination run wild and enjoy the game!

So klappt's am besten:

Die Beschleunigung der Murmeln auf der Quadrilla Kugelbahn wird über die unterschiedlichen Quader und/oder den kleinen roten Beschleuniger erzielt. Die Schienen müssen immer waagrecht aufgebaut werden! Die Höhe der Schiene kann im Aufbau mit einer lilafarbenen Platte ausgeglichen werden. Lasst eurer Fantasie freien Lauf. Viel Spaß beim Spielen!

Voici le meilleur fonctionnement:

L'accélération des billes sur le Quadrilla est réalisée avec différents blocs et/ou petits accélérateurs rouges. Les voies elles-mêmes doivent toujours être de niveau et ne doivent pas être construites en pente. La taille d'une voie peut être compensée par un élément mauve. Laissez galoper votre imagination et amusez-vous!

Betere Werking:

Het versnellen van de knikkers op Quadrilla wordt bereikt met verschillende blokken en/of de kleine rode versnellers. De sporen zelf moeten altijd op gelijke hoogte zijn en mogen niet met een helling worden gebouwd. De hoogte van een spoor kan met één paars element worden gecompenseerd. Laat uw verbeelding werken en geniet van het spelletje!

Come funziona meglio:

L'accelerazione delle biglie in Quadrilla è realizzata grazie ai diversi blocchi e alle rampe esistenti. Nel montare i diversi binari osserva che siano sempre alla stessa altezza per garantire una certa stabilità. L'altezza di un binario può essere compensata da un elemento color porpora. E adesso spazio alla tua fantasia e divertiti!
